Watch · Pause · Dig deeper · Resume

Interaction concept for a mobile-first city-history site. The documentary stays the spine; reading is a layer the viewer pulls up and drops back at the exact frame. Shown for Nashik, 16-minute film, six eras.

Grayscale wireframes · 390 × 844
orange = current / active state
Inter · no final colours or imagery

1 Watch

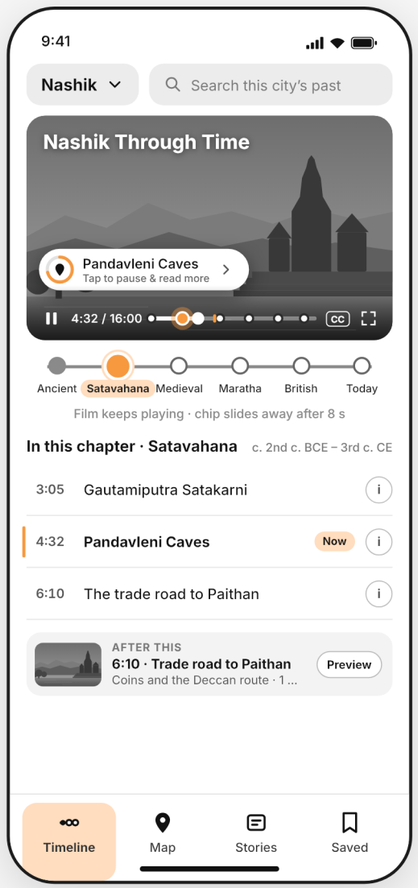

Film playing · era rail follows it

- **Chapter markers live on the scrub bar**: six era dots plus small orange ticks for every topic the film mentions.
- **The era rail under the video auto-advances** with playback, so the viewer always knows *when* they are.
- **"In this chapter" lists upcoming topics** with timestamps; any row can be opened without hunting.

2 Marker reached

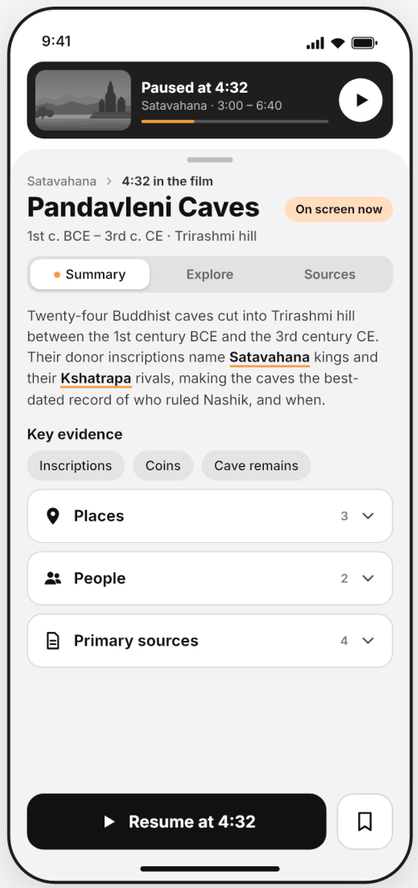

4:32 · a "Learn more" chip slides in

- **The film never interrupts itself.** At a marker a small chip appears over the frame with a countdown ring and leaves after 8 s.
- **Zero cost to ignore**: keep watching and nothing changes. The topic row below also lights up as "Now".
- **Two ways in**: tap the chip, or tap any tick or row, even for a topic the film already passed.

3 Pause & read

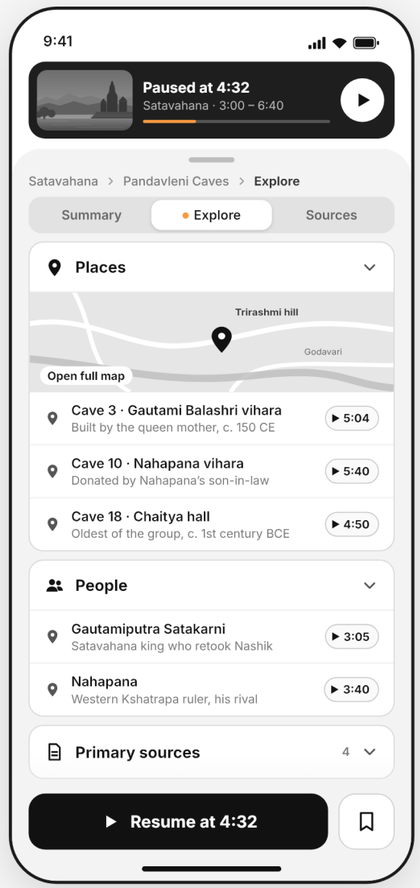

Video docks · bottom sheet opens

- **One tap auto-pauses** and shrinks the film into a mini-player pinned at the top. It stays visible so the viewer never feels they "left" the documentary.
- **Level 1 is a 3-line summary**, key-evidence chips and collapsed Places / People / Sources. Enough to satisfy most curiosity in 20 seconds.
- **"Resume at 4:32" is always the primary button**, fixed above the thumb.

4 Dig deeper

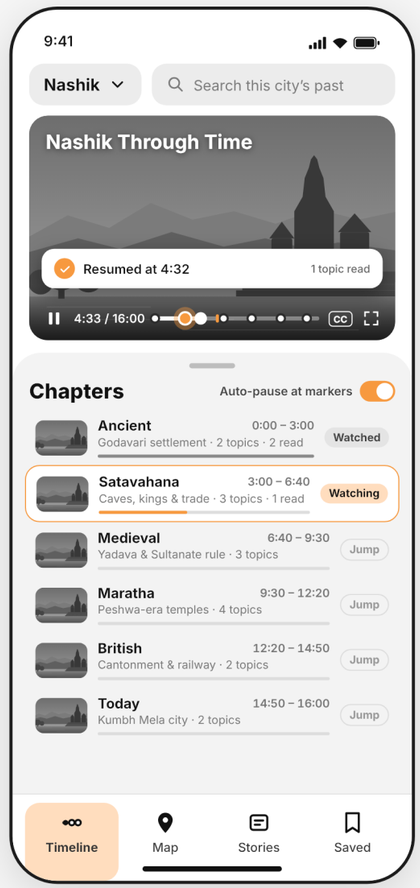

Explore level · map, places, people

- **Depth is a segmented control** (Summary › Explore › Sources), so the reader chooses how far to go and the breadcrumb shows where they are.
- **Every place and person links back into the film** (▶ 5:04). Reading can jump the documentary, not just the other way round.
- **Mini-player and Resume stay put** while the sheet scrolls, regardless of depth.

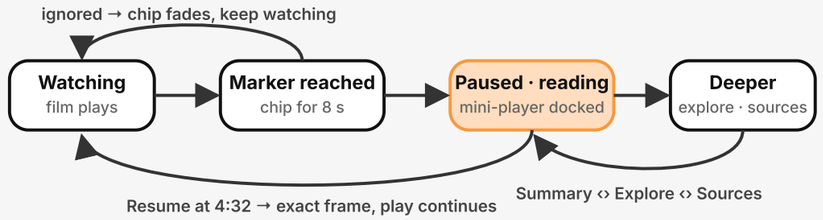

5 Resume & navigate

Back at the exact frame · chapter index

- **Resume returns to 4:32** with a quiet confirmation toast; reading progress is counted per topic.
- **Chapters sheet** (pull up the scrub bar) shows what has been watched and read per era, and lets the viewer jump anywhere.
- **Auto-pause toggle**: viewers who prefer no chips can switch to "only when I tap". Markers stay on the bar.

STATE FLOW

INTERACTION RULES

Never interrupt
The film pauses only on a deliberate tap, never by itself. Chips are invitations with a visible timer.

Depth on demand
Summary › Explore › Sources. Three levels, one control, breadcrumb always visible.

Links go both ways
Places, people and sources carry ▶ timestamps that jump the documentary to the matching shot.

Keep the film in view
A docked mini-player with the paused frame and timestamp keeps the sense of place while reading.

One-tap return
A fixed "Resume at m:ss" button is the only primary action in reading mode. Resume continues playback.

Works without the chips
Scrub-bar ticks, the topic list and the chapters sheet give the same content with auto-pause off.

GESTURES

Tap chip / tick / row	Pause + open topic sheet
Swipe sheet down	Dismiss and resume
Drag era rail	Jump between eras
Pull up scrub bar	Open chapters
Rotate phone	Full-screen film + side panel
